Global Business Informatics
Chairman of ITU Innovators

Hi reader, I'm Vlad and I'm a very big fan of startups and technology. I believe there needs to be a healthy balance between students going out of the university to get a job and students who pursue a higher purpose of starting a company and creating new innovative products or solutions. Call me a dreamer, but I believe that our society can develop faster if we all try our best to solve the problems around us, rather than just live a low-risk life waiting for our pension to kick in. While the corporates seem to be very well represented in the study environment, I try my best to show students the other side of the coin, and tell people more about entrepreneurship and how, when done properly, it isn't so stressful and risky, but exciting and motivating. What I know is only from personal experience or from the experience of others, like the authors of these books.
