Create an ORCID and transfer data to ORCID

Once your ORCID has been registered in CURIS it is possible to transfer data from CURIS to ORCID: organization, publications and personal ID’s (such as ResearcherID and Scopus ID) if registered in CURIS, will be transferred. Publication data will be transferred to ORCID if they have status as either “E-pub ahead of print” or Published, if they are registered as freely available, and if they have status “Approved” or “Validated”.

It is possible to populate your ORCID account with data from various sources, for example Web of Science, Scopus, ResearcherID or CrossRef. If you have used one or more of these sources to update ORCID, duplicates should not be created when updating from CURIS. It is advisable to only update ORCID manually or by import with a Bibtex file, if it is not possible to find your publications in one of the above databases.

Remember to use your ORCID whenever you publish, it helps us when registering your publications in CURIS!

1. Login to KUnet and click on CURIS under “My Access”.
2. Click on button “Edit profile” when in CURIS. In your profile click on “Create or Connect your ORCID ID” to create an ORCID and/or synchronise CURIS content with ORCID.
3. If you already have an ORCID registered in CURIS, you will be able to “Authorise export of content to ORCID” by clicking on the link on your profile page. You will be transferred to ORCID login where you must accept the conditions for automatic transfer.
4. After you have given permission to export CURIS content to ORCID, there will be a button in your profile “Export” and the date for last export will be shown. Data is exported once daily and by clicking on “Export” you can force an export straight away.
