An open platform for digital methods
Digital Social Science Lab (DSSL) is an open platform for education and events focusing on digital methods in social sciences. Equipped with 3 projectors and powerful iMacs and PC-workstations with preinstalled software, the lab is ready for the exploration of social scientific data.

The dynamic and aesthetically inspiring learning environment of DSSL is also available as a free workshop space for KU-teachers and students, who are organising workshops and events. Don’t hesitate to get in touch with us, if you want to get involved in co-creating the DSSL-environment!
